Net Present Value - The Basic Mechanics

 Moving away from the stylized model of present value, we begin by defining the **net present value** of an investment opportunity as

$$NPV = -I + \sum_{i=1}^{N} \frac{NCF_i}{(1+r)^i}$$
(1)

イロト イポト イヨト イヨト

- *NPV* is the net present value of the investment opportunity (the wealth created by the investment),
- I as the cost of the investment item,
- *NCF_i* as the net cash flow created by the investment in period *i*, and
- r as the weighted average cost of capitalweighted average cost of capital.

 As I = 0, N → ∞ and the cash flows are constant (i.e., NCF_i = NCF), the Net Present Value of the investment becomes

$$NPV = \frac{NCF}{r}.$$
 (2)

イロト イポト イヨト イヨト

• If an investment yields a constant return at the end of each period for N periods, the present value becomes

$$NPV = NCF \left\{ \frac{1 - \left(\frac{1}{1+r}\right)^{N}}{r} \right\}$$
(3)

• Formally, the expression in brackets is referred to as the present value of an ordinary annuity factor of N payments at an interest rate of r (PVAF_{N,r})

$$PVAF_{N,r} = \frac{1 - \left(\frac{1}{1+r}\right)^N}{r}.$$
(4)

Э

• The computation for the cash flow in Year 1 is

$$\frac{3,250}{(1+0.05)} = 3,095.24\tag{5}$$

• The computation for the cash flow in Year 2 is

$$\frac{3,250}{\left(1+0.05\right)^2} = 2,947.85\tag{6}$$

<ロト < 同ト < ヨト < ヨト -

1

• Note that the results indicate that for discount rates less than 8 percent, the net present value is positive.

• We can approximate the discount rate required to make the net present value equal to zero as

$$r^* = \left(\frac{0 - 24.36}{-420.75 - 24.36}\right) \times (0.09 - 0.08) + 0.08 = 0.080547$$
(7)

(or by linearly interpolating between the net present value at 0.09 and 0.08).

- The net present value at 0.080547 is -0.54.
- Here 0.080547 is a good approximation of the internal rate of return which will be more fully developed in a subsequent Lecture.

イロト イポト イヨト イヨト

Note that the annual cash flows in this example are constant
 we can rewrite the present value problem as

$$NPF = -15,0000 + \sum_{i=1}^{6} \frac{3,250}{(1+r)^i}$$

$$= -15,000 + 3,250 \sum_{i=1}^{6} \frac{1}{(1+r)^{i}}$$
(8)

ヘロト ヘロト ヘビト ヘビト

Э

SQA

 $= -15,000 + 3,250 \times PVAF_{6,r}.$

• Using the $PVAF_{N,r}$ from Equation 4 we see that for N=6 and r=0.06

$$PVAF_{6,0.06} = \frac{1 - \left(\frac{1}{1 + 0.06}\right)^{-6}}{0.06} = 4.9173$$
(9)

so the net present value of the investment in Table 1 at a discount rate of 0.06 becomes

$$NPV = -15,000 + 3,250 \times 4.9173$$

= -15,000 + 15,981.30 = 981,30 (10)

イロト イポト イヨト イヨト

Э

which conforms to the results given in the table.

Making Comparisons with Net Present Value – Equal Lives

Year	А	NPV_A	В	NPV_B	С	NPVC
0	-15,000	-15,000.00	-15000	-15,000.00	-15000	-15,000.00
1	3,250	3,037.38	3890	3,635.51	2670	2,495.33
2	3,250	2,838.68	3610	3,153.11	2880	2,515.50
3	3,250	2,652.97	3350	2,734.60	3100	2,530.52
4	3,250	2,479.41	3100	2,364.98	3350	2,555.70
5	3,250	2,317.21	2880	2,053.40	3610	2,573.88
6	3,250	2,165.61	2670	1,779.13	3890	2,592.07
Total		491.26		720.73		263.00

Э

SQA

- To motivate the next section a little, consider how we could construct a sequence of returns that (1) are constant and (2) will generate the same Present Value as the annual returns for the decreasing flow investment in Table 2.
- As a starting point

$$NPV = -15,000 + \frac{3,890}{1.07^{1}} + \frac{3610}{1.07^{2}} + \frac{3350}{1.07^{3}} + \frac{3100}{1.07^{4}} + \frac{2880}{1.07^{5}} + \frac{2670}{1.07^{6}}$$
$$= -15,000 + K \left(\frac{1}{1.07} + \frac{1}{1.07^{2}} + \frac{1}{1.07^{3}} + \frac{1}{1.07^{4}} + \frac{1}{1.07^{5}} + \frac{1}{1.07^{6}}\right)$$
(11)

• The basic question is what is K? We can derive K using the $PVAF_{0.07,6}$ – specifically, let us start with the present value of the decreasing series

$$\frac{3,890}{1.07^{1}} + \frac{3610}{1.07^{2}} + \frac{3350}{1.07^{3}} + \frac{3100}{1.07^{4}} + \frac{2880}{1.07^{5}} + \frac{2670}{1.07^{6}} = 15,720.73$$
(12)

• Therefore

$$K = \frac{15,720.73}{PVAF_{0.07,6}} = \frac{15,720.73}{\frac{1-1.07^{-6}}{0.07}}$$

$$= \frac{15,720.73}{4.7665} = 3298.14$$
(13)

< □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > <

1

	Dec	creasing	Con	Constant		
Year	Cas	Cash Flow		Flow		
1	3,890	3,635.51	3,298.14	3,082.38		
2	3,610	3,153.11	3,298.14	2,880.73		
3	3,350	2,734.60	3,298.14	2,692.27		
4	3,100	2,364.98	3,298.14	2,516.14		
5	2,880	2,053.40	3,298.14	2,351.53		
6	2,670	1,779.13	3,298.14	2,197.69		
Sum		15,720.73		15,720.73		

• Expanding the question a little further – we could ask what annual flow would return the same present value as the original investments?

$$NPV = -15,000 + \frac{3,890}{1.07} + \frac{3610}{1.07^2} + \frac{3350}{1.07^3} + \frac{3100}{1.07^4} + \frac{2880}{1.07^5} + \frac{2670}{1.07^6}$$
$$= k \left(\frac{1}{1.07} + \frac{1}{1.07^2} + \frac{1}{1.07^3} + \frac{1}{1.07^4} + \frac{1}{1.07^5} + \frac{1}{1.07^6} \right)$$
$$= 720.73 \Rightarrow k = \frac{720.73}{PVAF_{0.07,6}} = \frac{720.73}{4.7665} = 151.21$$
(14)

• So the annualized profit from this investment is \$ 151.21.

3

Multiple Projects

- Much of present value analysis is formulated in a binary decision framework (i.e., to accept the investment or not).
- As a starting point to our discussion, consider the cash inflows for five investment alternatives in Table 5, each of which requires an initial investment of \$20,000.
- Table 5 indicates that investments E, F, and G are acceptable at a discount rate of 8 percent.

(日)
